

COVID-19 Pandemic Response: Implementing Infection Prevention and Control

The COVID-19 pandemic has revealed the critical need for comprehensive **Infection Prevention and Control** across the health care spectrum. By working diligently to protect both our patients and our providers from the spread of infectious disease, we can create care environments safe from infection and enable our communities to reopen while mitigating the spread of COVID-19.

Comagine Health's education and consultation services for **Infection Prevention and Control** help mitigate costs associated with the COVID-19 pandemic, protect staff and vulnerable patient populations, and create a standardized, evidence-based approach to infection prevention. By working together, we can maintain levels of COVID-19 to allow society to reopen, address potential disparities within disadvantaged populations and enable our health care systems to function closer to normative levels.

Our best practices training, and education protocols and materials meet your specific and targeted needs through:

- 1) Interactive virtual training and education sessions facilitated by infection prevention and control experts
- 2) Real-time, one-on-one consultation with infection prevention advisors (registered nurses)
- 3) Access to recorded training sessions and frequently asked questions (FAQs) in infection prevention and control

In addition, our training and education sessions meet the Centers for Disease Control and Prevention standards and guidelines for quality training.

Targeted Training Sessions

Our team ensures all training and education sessions:

- Enhance the knowledge, skills and capacity of learners to prevent infection-related adverse outcomes
- Focus on coronaviruses, including isolation protocols, prevention of spread and state-specific reporting requirements
- Provide basic infection and prevention control techniques applicable to a variety of infectious agents beyond COVID-19
- Offer guidance on infection control principles specific to setting, including how to set up policies and procedures for visitors, use of personal protective equipment (PPE) and quality improvement processes related to infection control
- Are literacy-appropriate for all learners

About Comagine Health

Comagine Health is a national, mission-driven, nonprofit organization that has engaged in health care quality consulting and quality improvement (QI) services for more than 45 years. We work collaboratively with the community to reimagine, redesign and implement sustainable improvements in the health care system. We are national leaders in care management and population health, assisting front-line providers and engaging health care stakeholders to improve care delivery and patient outcomes.

Comagine Health possesses an extensive track record of addressing the most critical health care challenges and needs facing our communities. Through existing federal, state and private contracts, Comagine Health works to improve the quality and safety of health care for some of the nation's most vulnerable citizens. We have established, trusted working relationships across a variety of settings, including long-term care and skilled nursing facilities, public health agencies, tribal health agencies, rural and critical access hospitals, clinics serving disadvantaged populations and other non-healthcare-related essential services.

Our clinicians and other health care professionals are deeply committed to meeting the health needs of communities, particularly those of underserved populations. Comagine Health stands ready to join you in your efforts to reopen society, restart the economy and restore our health care systems.
